

HUSSmann®

INNOVATOR II Retrofit

Go from this traditional door...

...To this new Innovator II door

And get these immediate benefits:

- ▶ 20% energy savings
- ▶ Very easy to install
- ▶ No anti-sweat heat on glass or in perimeter or door frame
- ▶ Possible rebate opportunity in some areas
- ▶ Simple payback calculation

Reduce Your Operating Costs With an Innovator II Retrofit

If you're using Hussmann RL reach-ins, which have been available since 1996, with traditional (non-Innovator) doors and frames, you could be reducing monthly operating costs with a simple Innovator II door retrofit.

20% Reach-In Energy Cost Reduction

Innovator II is Hussmann's revolutionary reach-in door that sets the standard for reach-in efficiency. When retrofitting the older traditional doors with Innovator II, you can expect an immediate reach-in energy reduction of at least 20%.

Extremely Easy to Install

Changing out the older doors and installing Innovator II is simple. There are no electrical connections needed on the new door. We simply pull out the old door, mount the new hinge plates and hold-open hardware, and hang the new door. The door gaskets mate perfectly with the existing case frame.

No Anti-Sweat Heat

Innovator II is a true "no heat" door, using advanced insulation and construction to eliminate anti-sweat heat on the glass and in the door's perimeter frame. This door is suitable in all stores where inside humidity levels do not exceed 60%.

Possible Rebate Opportunity in Some Areas

Many utilities around the US offer rebates for energy reduction projects. We can provide expert assistance to research, identify, negotiate and help you take advantage of such rebates where available for Innovator II retrofits or other energy reduction projects.

Innovator II Retrofit ... a simple upgrade to reduce operating costs and increase profits.
