**Like Taking More
Than 6,400,000* Cars
Off the Road**

Always Working
to Protect the
Environment

Hussmann Protocol® HE

Compared to traditional rack systems, Hussmann Protocol HE reduces the average amount of refrigerant leaked by 87%. When you add to that the efficiency gains with Protocol HE, it's like taking over 160 cars off the road for every typical Protocol HE supermarket completed today.

What's more, Protocol HE is less expensive to install and operate than a conventional parallel rack. You save with less copper pipe, fewer trenches, smaller charge, fewer leaks, and in many cases, lower construction and energy costs.

Protocol is field proven, with thousands of installations around the world. It is highly reliable and easy to maintain. New options have made it more energy efficient and easier than ever to install.

The time has come for Protocol HE. It saves you money. It works. It reduces refrigerant leakage. If you've decided against Protocol in the past, it's time to think again. Protocol HE is the answer.

***If all 40,000+ supermarkets in America switched to Protocol HE, it would be like taking over 6,400,000 cars off the road! The time has come for Protocol HE.**

*Calculation based on a car traveling 13,000 miles per year at 24 miles per gallon.
