

Project:
Ultra Low Front Dairy Cases with Rear Access

Background:

A supermarket in Missouri needed refrigerated dairy cases that could provide maximum product capacity, energy savings and an efficient, non-intrusive way to stock product during normal store hours.

Solution:

Hussmann solved the customer's needs by providing a number of D6X-ULEP Excel dairy cases. The extended height and ultra low front of these cases allowed for 33% more merchandising space than standard dairy cases (see photo in middle).

These cases feature rear loading doors that open to a walk-in cooler, where product can be restocked out of sight of shoppers (see top photo). Loading from the rear also ensures older products get moved to the front without having to remove them from the shelves during stocking.

Hussmann also installed night curtains on these multi-deck cases to save energy when the store is closed (see bottom photo). The curtains are integrated into the case canopies and concealed when not in use.

With the D6X-ULEP dairy cases, Hussmann provided a true "show me" solution for this Missouri supermarket that achieved maximum merchandising, efficiency and energy savings.
