### **HUSSMANN ANNOUNCES NEW LED LIGHTING FOR MEDIUM TEMP MULTI-DECK SHELVES & CANOPIES**

Bridgeton, MO – Husmann Corporation, a leading manufacturer of refrigerated and frozen food merchandising equipment, has developed a new generation of Always\*Bright LED lights for shelves and canopies of medium temperature multi-deck display cases, as well as Reach-In cases with Innovator doors. The new LEDs provide bright, even illumination of products with lower energy costs.

Retailers can save 51% in light-related energy by using the Always\*Bright LED system over T-8 fluorescent lights. They can choose one of three LED color temperatures for shelves: 2900K, 3500K and 4100K.

Husmann Always\*Bright LED fixtures offer superior durability and extended lamp life (5-10 years), reducing the labor costs associated with replacing lamps.

Due to the slim design of the LED light fixtures, the light source is totally concealed under a tilted shelf or canopy and only slightly visible under higher-level flat shelves. With Husmann's Always\*Bright LEDs, customers see the products brightly and evenly illuminated.

The new Always\*Bright LED lights also work well for dimming or on/off operation using an occupancy sensor. They can be turned on and off in a cold environment with no warm-up time and no negative impact on lamp life.

The new LED lights for RLN Reach-Ins with Innovator doors will come in two color temperatures: 3500K and 4100K. Most of the LED benefits above apply to Reach-Ins as well, including 51% energy savings, even illumination, extended lamp life and dimming or on/off operation.

Husmann is a member of the US EPA GreenChill Advanced Refrigeration Partnership, a cooperative alliance with the supermarket industry to promote advanced technologies, strategies, and practices that reduce refrigerant charges and emissions of ozone-depleting substances and greenhouse gases.

Husmann is a part of Ingersoll Rand's Climate Control Technologies sector, which provides equipment and services to manage controlled-temperature environments for food and other temperature sensitive products. The sector encompasses both transport and stationary refrigeration solutions. In addition to Husmann, Ingersoll Rand product brands include Thermo King, a world leader in transport temperature control systems and Trane, a leading manufacturer of air conditioning and heating systems.
