Bridgeton, MO -- Hussmann Corporation, a leading manufacturer of refrigerated and frozen food merchandising equipment, has announced the early results of the company's Green program. In addition to benefiting the environment, Hussmann's Green initiative helps customers reduce their operating costs by providing more energy- and refrigerant-efficient products and services.

Since the beginning of 2008, results show sales of Hussmann Green products have reduced greenhouse gas emissions by the equivalent of 86 million pounds of CO2 and removed the equivalent of 8,196 cars from the road.

Over the past several years, Hussmann has launched a number of energy- and refrigerant-saving products and is currently working to develop several next generation Green products to meet customer needs. Hussmann Green products include Protocol refrigeration systems, Innovator II doors, Always*Bright LED lights, night curtains, Always*Clear glass coating, energy-efficient fan motors and coils, microchannel condensers and others.

Hussmann's Green commitment includes membership in the US EPA GreenChill Advanced Refrigeration Partnership. GreenChill is a cooperative alliance with the supermarket industry to promote advanced technologies, strategies, and practices that reduce refrigerant charges and emissions of ozone-depleting substances and greenhouse gases.

Hussmann is a part of Ingersoll Rand's Climate Control Technologies sector, which provides equipment and services to manage controlled-temperature environments for food and other temperature sensitive products. The sector encompasses both transport and stationary refrigeration solutions. In addition to Hussmann, Ingersoll Rand product brands include Thermo King, a world leader in transport temperature control systems and Trane, a leading manufacturer of air conditioning and heating systems.

For more information on the Hussmann Green program, visit <http://www.hussmann.com/alwaysgreen/>
