

Hussmann Protocol

Helping Supermarkets With GreenChill Certification

Hussmann is a recipient of the EPA Stratospheric Ozone Protection Award for developing the Protocol Refrigeration System. Now Hussmann is continuing that award winning tradition by helping supermarkets attain GreenChill Certification with Protocol Systems.

How Protocol helps you achieve GreenChill Certification:

- 50% to 80% less refrigerant than traditional rack systems
- Leak rates normally reduced by over 80%
- New Microchannel Condensers reduce charge in the condenser by 75%-90%
- Much smaller leak potential in the event of a major leak
- 50%-75% less piping and braze joints

How Protocol helps protect your bottom line:

- Up to 5% more efficient than traditional rack systems
- Lower construction costs, no machine room needed, less construction materials
- Less piping reduces installation costs
- Field proven reliability
- Easy to service and maintain

"GreenChill encourages supermarkets to attain GreenChill Certification for their stores by adopting Advanced Refrigeration Technologies that protect the environment. We support all refrigeration systems that can help you achieve this goal." Keilly Witman, Communications, Voluntary Programs, EPA, Stratospheric Protection Division.
