Note: Changes are NOT underlined.
Revision A added the canopy anti-sweat heater (pages 1, 4, 5 & 8); added 4-ft and 6-ft data (pages 1, 2, 3 & 4); and updated wiring diagrams.
Revision B returned the correct data to page 3.
Revision C returned the correct data to page 1.

SHELF CONFIGURATION

This merchandiser is designed for two or three shelves.

The depth of the shelf used in the top eight (8) shelf hole locations is critical to case performance.

If a shelf is placed in one of the top eight (8) locations it must comply with the angle/depth requirements listed below.

Shelf Angle	Maximum Shelf Depth
0°	12 in.
15°	14 in. or less
30°	18 in. or less
45°	18 in. or less

NOTE: Shelves placed in the lower positions may be up to 18 in. deep when positioned at a 0° angle.

The ballast for the canopy and shelf lamps is located behind the light tray on the left-hand end (when facing case) of the merchandiser.

To access the ballast:

1. Remove screws from the front-lip of light tray flange covering the bottom edge of the canopy. Also remove screws located near the middle-rear of light tray.
2. Swing front of light channel down on it's rear hinge.
3. Service or replace ballasts as required.
4. Reassemble items as they were originally installed. Make sure that wires are not pinched by re-installed light tray.

NOTE: Rail lamp ballast is located behind the lower front panel.

CANOPY ANTI-SWEAT HEATER

The canopy anti-sweat heater location is shown below. Connections are in the Electrical wireway.
