## HUSSMANN®

# SHM Medium Temperature Self Contained Specialty Horizontal Merchandiser

Shown with 3-sided Bumper

Installation & Operation Manual

IMPORTANT
Keep in store
for future reference!

P/N 0515258\_G November 2014 Spanish 0531303 French 0531304

P/N 0515258\_G iii

Merchandiser must operate for 24 hours before loading product!

Regularly check merchandiser temperatures.

Do not break the cold chain. Keep products in cooler before loading into merchandiser.

These merchandisers are designed for pre-chilled products only.

#### IMPORTANT KEEP IN STORE FOR FUTURE REFERENCE

Quality that sets industry standards!

#### REVISION HISTORY

**REVISION G** — Note on cover page. Removed model SHM-4BW, Page 1-2, Added California Prop 65 Warning, Page 1-2 Updated Night Curtain Instructions, Page 1-5 Added New Parts List, Page A-1

REVISION F — Added Checklists Page 1-7; Added Warning Page 1-3; Cleaning Coils 4-3; Maintaining Fluorescent Lights 4-4. Checklist Page 4-5

#### REVISION E — JULY 2013

 Included Night Curtain Installation Instructions Page 1-5 and 1-6

#### REVISION D — FEBRUARY 2012

- 1. Changed NEMA plug
- 2. Removed Remote Case setup instructions

#### REVISION C — JANUARY 2012

- 1. Added LED Light Bars
- 2. Removed Remote Models
- 3. New Wiring Diagram SHM-3, SHM-4

#### **REVISION B** — *DECEMBER 2010*

- 1. Revised defrost settings, Page 3-3
- 2. Changed Defrost Frequency (2); Page 3-7
- 3. Revised defrost settings; Page A-3

#### ORIGINAL ISSUE — NOVEMBER 2010

#### ANSI Z535.5 DEFINITIONS

• **DANGER** – Indicate[s] a hazardous situation which, if not avoided, will result in death or serious injury.

• **WARNING** – Indicate[s] a hazardous situation which, if not avoided, could result in death or serious injury.

• **CAUTION** – Indicate[s] a hazardous situation which, if not avoided, could result in minor or moderate injury.

• **NOTICE** – *Not related to personal injury* – Indicates[s] situations, which if not avoided, could result in damage to equipment.

#### INSTALLATION

#### **CERTIFICATION**

These merchandisers are manufactured to meet ANSI / National Sanitation Foundation (NSF®) Standard #7 requirements. Proper installation is required to maintain certification. Near the serial plate, each case carries a label identifying the type of application for which the case was certified

ANSI/NSF-7 Type I - Display Refrigerator / Freezer Intended for 75°F / 55% RH Ambient Application

ANSI/NSF-7 Type II - Display Refrigerator / Freezer Intended for 80°F / 55% RH Ambient Application

ANSI/NSF-7 - Display Refrigerator Intended for Bulk Produce

#### **HUSSMANN PRODUCT CONTROL**

The serial number and shipping date of all equipment is recorded in Hussmann's files for warranty and replacement part purposes. All correspondence pertaining to warranty or parts ordering must include the serial number of each piece of equipment involved. This is to ensure the customer is provided with the correct parts.

#### SHIPPING DAMAGE

All equipment should be thoroughly examined for shipping damage before and during unloading. This equipment has been carefully inspected at our factory. Any claim for loss or damage must be made to the carrier. The carrier will provide any necessary inspection reports and/or claim forms.

#### **Apparent Loss or Damage**

If there is an obvious loss or damage, it must be noted on the freight bill or express receipt and signed by the carrier's agent; otherwise, carrier may refuse claim.

#### **Concealed Loss or Damage**

When loss or damage is not apparent until after equipment is uncrated, retain all packing materials and submit a written response to the carrier for inspection within 15 days.

#### **LOCATION**

These merchandisers are designed for displaying products in air conditioned stores where temperature is maintained at or below the ANSI / NSF-7 specified level and relative humidity is maintained at or below 55%.

Recommended operating ambient temperature is between 65°F (18°C) to 75°F (23.9°C). Maximum relative humidity is 55%.

Placing refrigerated merchandisers in direct sunlight, near hot tables or near other heat sources could impair their efficiency. Like other merchandisers, these merchandisers are sensitive to air disturbances. Air currents passing around merchandisers will seriously impair their operation. Do NOT allow air conditioning, electric fans, open doors or windows, etc. to create air currents around the merchandiser.

#### SELF CONTAINED LOCATION

Product should always be maintained at proper temperature. This means that from the time the product is received, through storage, preparation and display, the temperature of the product must be controlled to maximize the life of the product.

BE SURE TO POSITION SELF CONTAINED MERCHANDISERS PROPERLY.

SELF CONTAINED models have vented base panels to allow air circulation through the condensing unit.

See illustrations for clearances distances from walls, merchandisers, and any other large objects near the merchandiser's vented base panels. Blocking or restricting air flow will adversely affect performance and may damage the refrigeration system.

For California Businesses:

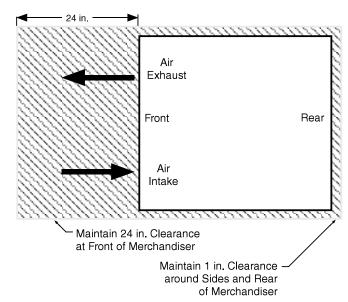

This product may contain chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm.

This warning is the result of the California State law known as the California Safe Drinking Water and Toxic Enforcement Act of 1986, which is commonly referred to as "Proposition 65."

This warning does not mean that Hussmann products will cause cancer or reproductive harm, or is in violation of any product-safety standards or requirements. As clarified by the California State government, Proposition 65 can be considered more of a 'right to know' law than a pure product safety law. When used as designed, Hussmann believes that our products are not harmful. We provide the Proposition 65 warning to stay in compliance with California State law. It is your responsibility to provide accurate Proposition 65 warning labels to your customers when necessary. For more information on Proposition 65, please visit the California State government website.

P/N 0515258\_G 1-3

#### MODEL DESCRIPTION

SHM merchandisers offer versatility for the display of food items such as: fresh fruit, vegetables, cheeses and other delicatessen items. Carefully read and follow the instructions prior to operating the merchandiser.

#### UNLOADING

#### **Unloading from Trailer:**

Lever Bar (also known as a Mule, Johnson Bar, J-bar, Lever Dolly, or Pry Lever)

Move the merchandiser as close as possible to its permanent location and remove all packaging. Check for damage before discarding packaging. Remove all separately packed accessories such as kits and shelves.

Improper handling may cause damage to the merchandiser when unloading. To avoid damage:

- 1. Do not drag the merchandiser out of the trailer. Use a Johnson bar (mule).
- 2. Use a forklift or dolly to remove the merchandiser from the trailer.

#### EXTERIOR LOADING

**Do NOT walk on top of merchandisers** or damage to the merchandisers and serious personal injury could occur.

MERCHANDISERS ARE NOT STRUCTURALLY DESIGNED TO SUPPORT EXCESSIVE EXTERNAL LOADING such as the weight of a person. Do not place heavy objects on the merchandiser.

#### SHIPPING SKID

Each merchandiser is shipped on a skid to protect the merchandiser's base, and to make positioning the case easier.

Do not remove the shipping skid until the merchandiser is near its final location. The skid provides protection for both the merchandiser and the floor.

Remove the skid by raising one end of the merchandiser approximately 6 inches. Block the merchandiser securely, and remove the two skid bolts from the raised end. Replace the bolts with (provided) leg levelers. Repeat this procedure at opposing end. Once the leg levelers are secured in place, the merchandiser may be slid off the skid and placed in its final location.

## DO NOT TILT MERCHANDISER ON ITS SIDE OR END WHEN REMOVING SKID.

Once the skid is removed, the merchandiser must be lifted —NOT PUSHED— to reposition.

Check floor where merchandisers are to be set to see if it is a level area. Determine the highest part of the floor.

Do NOT remove shipping crate until the merchandiser is positioned for installation.

Do NOT stand or walk on top of merchandiser. Do not store items or flammable materials atop the unit.

#### MERCHANDISER LEVELING

BE SURE TO POSITION MERCHANDISERS PROPER-LY. Level the merchandiser by all four corners. Merchandiser(s) must be installed level to ensure proper operation of the refrigeration system, and to ensure proper drainage of defrost water. Optional leg levelers can be provided for this purpose.

#### **OPTIONAL LEGS**

NSF® approved legs replace the leg levelers if required by local health codes. The legs raise the case 6 inches for cleaning purposes. An optional skirt kit can be provided to snap on the legs.

#### SERIAL PLATE LOCATION

The serial plate is located on the interior left wall of the merchandiser. It contains all pertinent information such as model, serial number, amperage rating, refrigerant type and charge. This information will be needed to install, service or order parts for the merchandiser.

#### REFRIGERATION UNIT ACCESS

The lower access panel may be removed by lifting the panel straight upward and over the screws on which it is hanging. The panel is installed by reversing the above procedure.

Ensure lower access panel is flat against the floor when installed to prevent air circulation problems on self contained merchandisers.

Safe-NET III display is mounted on left side of access panel. Be careful not to detach Safe-NET III cable from display when removing access panel.

#### SEALING MERCHANDISER TO FLOOR

If required by local sanitary codes, or if the customer desires, merchandisers may be sealed to the floor using a vinyl cove base trim. The size needed will depend on how much variation there is in the floor, from one end of the merchandiser to the other. Sealing of the lower front and rear panels on self contained models may hamper their removal for servicing or maintenance of the condensing unit.

**NOTE:** Do not allow trim to cover any intake or discharge grilles located in the lower front panel.

P/N 0515258\_G 1-5

#### (OPTIONAL) NIGHT CURTAIN

Night curtains are used to cover the case opening after normal business hours. The curtains improve energy consumption, allowing the refrigeration system to work less. Night curtains ordered with the case are factory installed.

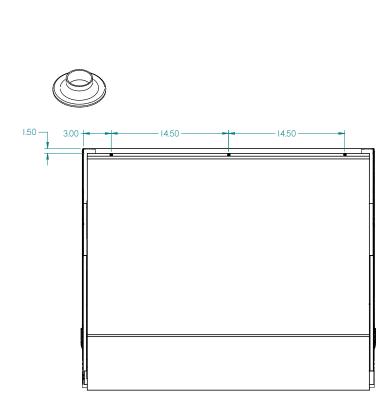

#### PARTS LIST (per curtain)

Item	Quantity	Description
1.	1	Night Curtain

2. 3 Screw Phil Pan (#8

3. 1 Clip bottom

- 1. Put night curtain on top panel, one end of the will use to curtain to fasten screw. Take a distance 1.50 inches to edge part end night curtain. And center night curtain to length case.
- 2. Use 3 Screw, Phil Pan, #8 X ½"

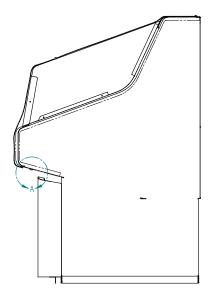

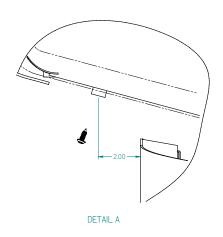

#### 1-6 Installation

3. Put clip in bottom, take to reference access panel 2.00 inches

P/N 0515258\_G 1-7

#### Hussmann Self-Contained Refrigeration Equipment Start Up Check List

\*\*\*Please note that failure to follow this start-up document may void your factory warranty\*\*\*

Step	Startup Activity	Check
1	Locate, read and maintain install/operation manual in a safe place for future reference.	
2	Examine unit. Confirm there is NO damage or concealed damage.	
3	Level the unit, side to side and front to rear.	
4	Remove all shipping brackets/compressor straps/bolts etc.	
5	Unit must be run on a dedicated electrical circuit without the use of an extension cord.	
6	Ensure that the proper electrical requirements for the equipment are supplied.	
7	Verify field electrical connections are tight.	
8	Verify all electrical wiring is secured and clear of any sharp edges or hot lines.	
9	Verify the condensate drain line is properly trapped and pitched.	
10	Verify all required clearances on the sides and back of unit.	
11	Verify there are no air disturbances external to the unit. Heat and air registers, fans, and doors etc.	
Advise o	owner/operator that merchandiser must operate at temperature for 24 hrs prid with product.	or to loading

Form HSCW01 Rev. 30MAY12 P/N 0525209\_B

#### LEGAL DISCLAIMER:

Hussmann shall not be liable for any repair or replacements made without the written consent of Hussmann, or when the product is installed or operated in a manner contrary to the printed instructions covering installation and service which accompanied such product.

1-8	INSTALLATION
1-0	INSTALLATION

NOTES:

P/N 0515258\_G 2-1

#### **ELECTRICAL / REFRIGERATION**

#### MERCHANDISER ELECTRICAL DATA

Refer to Appendix A of this manual or the merchandiser's serial plate for electrical information.

#### FIELD WIRING

Field wiring must be sized for component amperes stamped on the serial plate. Actual ampere draw may be less than specified.

## ALWAYS CHECK THE SERIAL PLATE FOR COMPONENT AMPERES

#### **ELECTRICAL CONNECTIONS**

All wiring must be in compliance with NEC and local codes. All electrical connections *(for remote models)* are to be made in the electrical *Handy Box* located behind the removable base panel at the left end of the merchandiser when facing the discharge air louver.

#### **ELECTRICAL OUTLET:**

Before the merchandiser is connected to any wall circuit, use a voltmeter to check that the outlet is at 100% of the rated voltage. The wall circuit must be dedicated for the merchandiser. Failure to do so voids the warranty. Do not use an extension cord. Never plug in more than one merchandiser per electrical circuit.

- Always use a dedicated circuit with the amperage stated on the unit.
- Plug into an outlet designed for the plug.
- Do not overload the circuit
- Do not use long or thin extension cords. Never use adapters.
- If in doubt, call an electrician.

## **A** WARNING

— LOCK OUT / TAG OUT —

To avoid serious injury or death from electrical shock, always disconnect the electrical power at the main disconnect when servicing or replacing any electrical component. This includes, but is not limited to, such items as doors, lights, fans, heaters, and thermostats.

NEMA 5-15F Receptacle SHM Self-contained models have factory -installed power cords attached at the electrical box.

## **A** WARNING

Risk of Electric Shock. If cord or plug becomes damaged, replace only with a cord and plug of the same type.

## **WARNING**

Merchandiser must be grounded.

Do not remove the power supply cord ground.

## **REFRIGERATION** (Self Contained Models)

Each self contained model is equipped with its own condensing unit and control panel located beneath the display area. The merchandiser refrigeration piping is leak tested. The unit is charged with refrigerant and shipped from the factory with all service valves open.

## **REFRIGERATION**(Self Contained Models Continued)

SHM-3 self contained merchandisers use R-404a refrigerant. SHM-4 self contained merchandisers use R-134a refrigerant. All models have a hermetic compressor. The systems employ capillary tubes for refrigerant flow control. The capillary tube is soldered to the suction line pull-out coil for proper heat exchange. If the capillary should become plugged or damaged, it is best to replace the heat exchanger.

## **A** WARNING

Refrigeration lines are under pressure. Refrigerant must be recovered before attempting any connection or repair.

#### WATER OUTLET AND WATER SEAL

The condensate water outlet is located in the center of the merchandiser. The outlet has a factory installed, external water seal.

For self contained models, this water seal drains into the condensate evaporator pan located beneath the merchandiser. The pan uses a thermistor that senses water in the pan and adjusts the amount of heat required to evaporate the water. Ensure the drain hose is properly trapped, and the drain area is not clogged.

**NOTE:** All lower base panels must be in place when the refrigerator is operating. If not, airflow from the condenser will be directed over the evaporator pan and defrost water in the pan may overflow.

## **↑** CAUTION

When brazing pipes, be sure to use the insulation blanket shipped with the merchandiser to prevent damage to the metal merchandiser bottom.

#### START UP / OPERATION

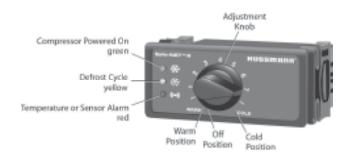

It is the contractor's responsibility to install merchandiser(s) in accordance with all local building and health codes.

Safe-NET III™
TEMPERATURE AND DEFROST
CONTROLLER

#### SAFE-NET III<sup>TM</sup> USER INSTRUCTIONS

Your refrigerated case uses a Hussmann Safe-NET<sup>TM</sup> III temperature and defrost controller to precisely maintain the temperature and prevent frost buildup on the cooling coil. LEDs indicate when the compressor or refrigeration is on, when the case is in a defrost cycle, if the temperature is outside the desired range, or if there is a sensor failure.

An adjustment knob allows the temperature to be set within the configured range and can power off the controller and compressor. Your controller has been custom-configured to provide the best temperature and defrost control for your chilled or frozen food.

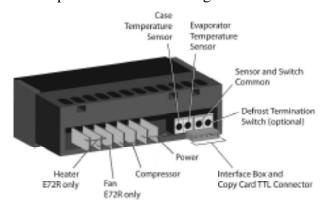

The front of the controller has an adjustment knob and status LEDs. The back of the controller has connections for sensors and switched equipment.

The Safe-NET III controller includes the following features and connections.

Adjustment knob:
 Adjusts the temperature setpoint.

 Turn adjustment knob to OFF to turn off refrigeration system. Unplug merchandiser from power before servicing the unit.

- \* Controller LEDs:
  - Compressor Powered On LED (green): Lights while the compressor is running or
- the refrigeration valve is open.

  Defrost Cycle LED (yellow):

  Lights while the refrigeration coil is
- (w) defrosting.

Temperature or Sensor Alarm (red): Lights if the temperature is too warm or too cold. Flashes if a sensor fails.

- Rear connections:
- Case temperature sensor:
  - Typically senses the temperature of the air in the case.
     Used by the controller to determine when to power on or power off the compressor or refrigeration.
- Evaporator temperature sensor:
  - Senses the temperature of the refrigeration coil.
     Terminates a defrost cycle when refrigeration coil ice melts.
- Compressor or refrigeration relay:
  - Switches on the compressor or refrigeration valve for cooling.

The optional evaporator fan remains ON when the adjustment knob is in the Off position.

#### **DISPLAY**

The display includes three red LEDs and two digits for temperature, defrost status, and error codes.

The three display LEDs are red, and their behavior matches the LEDs on the controller.

#### **START-UP**

1. Plug in the merchandiser.

## **WARNING**

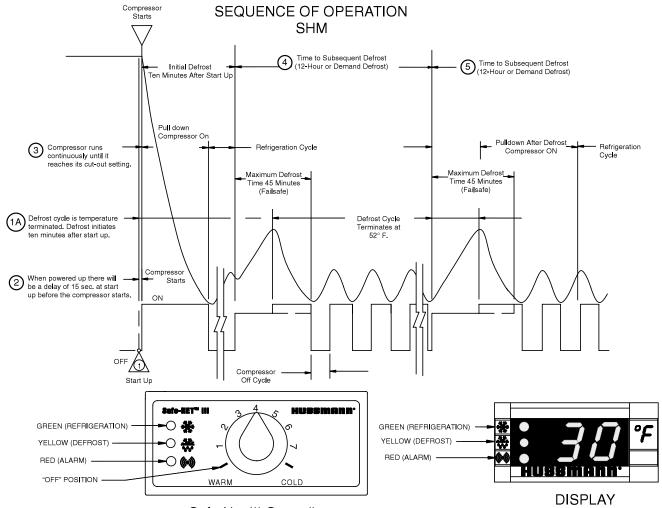

The OFF Position does not disconnect line voltage to the case, refrigeration unit, fan, or heater.

- 2. The 65°C Version Controller includes a Parameter Code Number. This number indicates what program has been loaded into the controller. When the Controller is first powered up or is turned off and then back on a 2 digit Parameter Code Number will display for 3 seconds. Then the self check will start.
- 3. Wait for the self check to complete. During the self check, each LED flashes for one second, then all LEDs turn on for two seconds. If the LEDs do not flash, make sure the adjustment knob is not in the Off position.
  - After the self check, all LEDs turn off until the compressor starts. There may be a delay before the compressor starts. If the red Temperature or Sensor Alarm LED stays on after the self check.
  - The green Compressor Powered On LED turns on when the compressor starts.

Safe-NET Parameter Codes: SHM-3 & 4 Code is 52

NOTE: Do NOT load product until AFTER merchandiser operates for 24 hours and reaches desired operating temperature.

P/N 0515258\_G 3-3

Safe-Net III Controller

- 1. The 65°C Version Controller includes a Parameter Code Number. This number indicates what program has been loaded into the controller. When the Controller is first powered up or is turned off and then back on a 2 digit Parameter Code Number will display for 3 seconds. Then the self check will start. Apply power to the merchandiser. Wait for the self check to complete. During the self check, each LED flashes for one second and then all LEDs turn on for two seconds. If the LEDs do not flash, make sure the adjustment knob is not in the "OFF" position.
- **1A.** The merchandiser temperature displays at startup. The initial defrost will start after ten minutes if the coil is colder than 52° F. The display will show the temperature before defrost. This reading will remain displayed

- during defrost and for 50 minutes after defrost. Even though the refrigeration mode has been initiated. (The green LED will be lit.)2. The compressor will start after a delay 30 seconds after the power is applied.
- **3.** The compressor will continue to run until it reaches its cut-out temperature (Pulldown).
- **4.** The refrigeration cycle will continue for the next subsequent scheduled (12-hours) or demand defrost.
- **5.** The above process will repeat (steps 3 and 4) until the power is interrupted. The digital display will display the temperature reading for 50 minutes after defrost.
- **6.** If power stops, the process will start over at step 1, and the time to subsequent defrost will reset.

#### TEMPERATURE ADJUSTMENT

Rotate the adjustment knob counter clockwise for a warmer setpoint or clockwise for a colder setpoint.

• While the temperature is being adjusted, the optional display shows the setpoint (cut out value). A few seconds after the temperature is set, the display reverts to showing the sensed temperature in the merchandiser.

#### ALARMS AND CODES

FLASHING TEMPERATURE OR SENSOR ALARM LED, E1 or E2

If the Temperature or Sensor Alarm LED (red) on the controller and display is flashing, a temperature sensor has failed. The display shows E1 if the case sensor has failed or E2 if the evaporator sensor has failed.

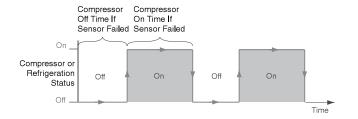

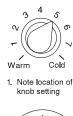

If the merchandiser sensor fails, refrigeration will run continuously. Turn off, or repeat a duty cycle of a few minutes on and a few minutes off.

#### **DEFROST TERMINATION SWITCH**

Merchandisers may use a defrost termination switch, instead of an evaporator sensor to terminate a defrost cycle. The defrost termination switch is temperature activated and senses the completion of defrost.

#### MANUAL DEFROST

 Rotate knob fully counterclockwise until it stops (full warm - "OFF" position

 After 10 seconds, but before 20 seconds, rotate knob fully clockwise until it stops (full cold position) Note:
This procedure initiates
a manual or forced
defrost.

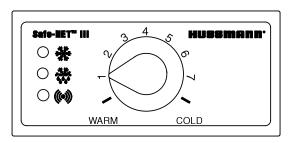

**IMPORTANT:** Return the control knob to its original setting (Step 1) once the manual defrost has been initiated.

P/N 0515258\_G 3-5

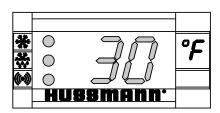

Display - at Full Cold Model SHM

Safe-NET III Control # 1 Position

Display - at #1 Position

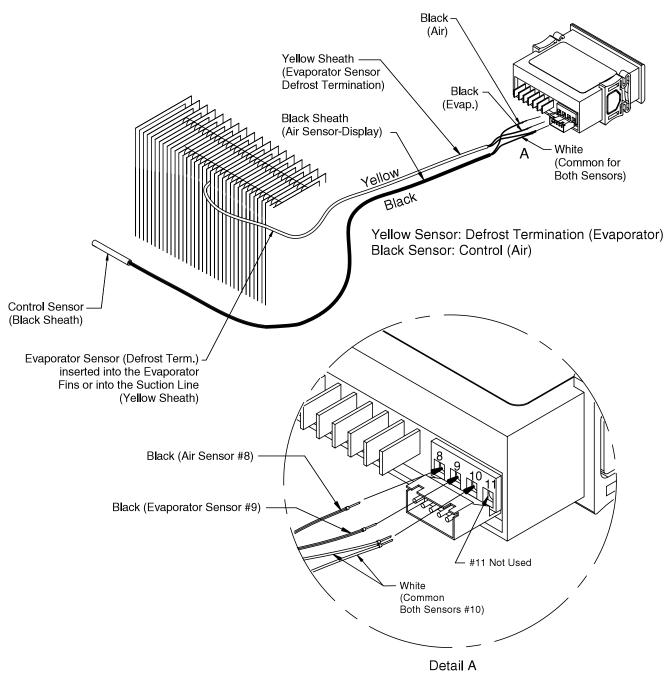

#### TEMPERATURE ADJUSTMENT

Rotate the adjustment knob counter clockwise for a warmer setpoint or clockwise for a colder setpoint.

While the temperature is being adjusted, the optional display shows the setpoint (cut out value).

A few seconds after the temperature is set, the display reverts to showing the sensed temperature in the merchandiser.

#### Typical Sensor to Control Configuration

P/N 0515258\_G 3-7

#### **CONTROLS and ADJUSTMENTS**

Refrigeration Controls			Defrost Controls			
Model	Product Application	Discharge Air Temperature	Defrost Frequency (per day)	Type of Defrost	Temp. Termination	Failsafe Time (Minutes)
SHM Self Contained	Medium Temp. (Dairy, Deli)	32° F- 38° F	2	Off Time	52° F	45

1. The Safe-NET III Controller controls refrigeration temperature. This is factory installed in the control panel. Adjust this control knob to maintain the discharge air temperature shown. Measure discharge air temperatures at the center of the discharge honeycomb.

Defrosts are time initiated and temperature terminated. The defrost setting is factory set as shown above.

To ensure a thorough defrost, defrost must be terminated by the temperature termination setting — not by time.

#### START UP

Follow the Safe-NET III start up procedures as detailed in Section 3 of this manual. A thorough inspection should be made prior to start up to ensure there are no loose nuts, bolts, electrical connections or refrigeration lines rubbing or chaffing.

Turn the power switch to the ON position. Allow the system to reach normal operating temperature prior to loading any product. The merchandiser cabinet has a forced air curtain that flows over the top of the product. Air flows out of the honeycomb diffuser, across the product, and into the return air duct.

#### LOAD LIMITS

Each merchandiser has a load limit decal. Shelf life of perishables will be short if load limit is violated.

#### **LOAD LIMIT**

AT NO TIME SHOULD MERCHANDISERS BE STOCKED BEYOND THE LOAD LIMITS INDICATED.

## DO NOT BLOCK HONEYCOMB OR RETURN AIR GRILLE.

#### STOCKING

Product should NOT be placed inside the merchandisers until merchandisers are at proper operating temperature.

Allow merchandiser 24 hours to operate before loading product.

## **A** WARNING

Product will be degraded and may spoil if allowed to sit in a non-refrigerated area.

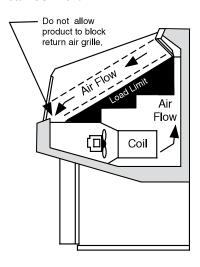

Proper rotation of product during stocking is necessary to prevent product loss. Always bring the oldest product to the front and set the newest to the back.

AIR DISCHARGE AND RETURN FLUES MUST REMAIN OPEN AND FREE OF OBSTRUCTION AT ALL TIMES to provide proper refrigeration and air curtain performance. Do not allow product, packages, signs, etc. to block these grilles. Do not use non-approved shelving, baskets, display racks, or any accessory that could hamper air curtain performance.

Do not allow product to be placed outside of the designated load limits in the illustration.

#### **THERMOMETER**

A solar powered thermometer is provided with each merchandiser. Temperature display in Fahrenheit degrees is standard. Celsius display is available as an option. The thermometer is located in the cabinet interior in the top left hand rear corner.

#### **MAINTENANCE**

Do:

#### **CARE AND CLEANING**

Long life and satisfactory performance of any equipment is dependent upon the care it receives. To ensure long life, proper sanitation and minimum maintenance costs, these merchandisers should be thoroughly cleaned, all debris removed and the interiors washed down, weekly.

#### **Exterior Surfaces**

The exterior surfaces must be cleaned with a mild detergent and warm water to protect and maintain their attractive finish. NEVER USE ABRASIVE CLEANSERS OR SCOURING PADS.

#### **Interior Surfaces**

The interior surfaces may be cleaned with most domestic detergents, ammonia based cleaners and sanitizing solutions with no harm to the surface. Self contained models empty into a limited capacity evaporation pan, which will overflow if excess water is used in cleaning.

#### Do NOT Use:

- •Abrasive cleansers and scouring pads, as these will mar the finish.
- •Coarse paper towels on coated glass.
- •Ammonia-based cleaners on acrylic parts.
- •Solvent, oil or acidic based cleaners on any interior surfaces.
- •Do not use high pressure water hoses.

## **WARNING**

Product will be degraded and may spoil if allowed to sit in a non-refrigerated area.

- •Remove the product and all loose debris to avoid clogging the waste outlet.
- •Store product in a refrigerated area such as a cooler. Remove only as much product as can be taken to the cooler in a timely manner.
- •Disconnect electrical power before cleaning.
- •Thoroughly clean all surfaces with soap and hot water. **DO NOT USE STEAM OR HIGH WATER PRESSURE HOSES TO WASH THE INTERIOR.**THESE WILL DESTROY THE MERCHANDISERS' SEALING CAUSING LEAKS AND POOR PERFORMANCE.
- •Lift hinged fan plenum for cleaning. Hook chain in rear panel to secure plenum during cleaning. BE SURE TO REPOSITION THE FAN PLENUM AFTER CLEANING MERCHANDISER.
- •Take care to minimize direct contact between fan motors and cleaning or rinse water.
- •Do NOT flood merchandiser with water.

Do NOT allow cleaning agent or cloth to contact food product.

NEVER INTRODUCE WATER FASTER THAN THE WASTE OUTLET CAN REMOVE IT.

SELF CONTAINED MODELS EMPTY INTO AN EVAPORATION PAN THAT WILL OVERFLOW IF TOO MUCH WATER IS INTRODUCED DURING CLEANING.

- •Allow merchandisers to dry before resuming operation.
- •After cleaning is completed, turn on power to the merchandiser.

## **A** WARNING

— LOCK OUT / TAG OUT —
To avoid serious injury or death from electrical shock, always disconnect the electrical power at the main disconnect when servicing

power at the main disconnect when servicing or replacing any electrical component. This includes, but is not limited to, such items as doors, lights, fans, heaters, and thermostats.

#### CLEANING DISCHARGE HONEYCOMB

Discharge honeycombs should be cleaned every six months. Dirty honeycombs will cause merchandisers to perform poorly. The honeycombs may be cleaned with a vacuum cleaner. Soap and water may be used if all water is removed from the honeycomb cells before replacing. Be careful not to damage the honeycomb.

- 1. Using a flat object such as a screw driver, compress the honeycomb and remove it from its retainer.
- 2. Clean and dry the honeycomb.
- 3. After cleaning, replace in reverse order. Damaged honeycomb must be replaced.

# **↑** CAUTION

#### **DO NOT FLOOD!**

Use only enough water necessary to clean surface. Water must not drip down the case!

Never use ammonia based cleansers, abrasive cleansers, or scouring pads.

#### CLEANING STAINLESS STEEL SURFACES

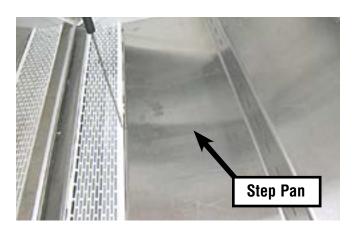

Use non-abrasive cleaning materials, and always polish with grain of the steel. Use warm water or add a mild detergent to the water and apply with a cloth. Always wipe rails dry after wetting.

Use alkaline chlorinated or non-chlorine containing cleaners such as window cleaners and mild detergents. Do not use cleaners containing salts as this may cause pitting and rusting of the stainless steel finish. Do not use bleach.

#### **CLEANING UNDER STEP PAN**

Remove all product from the merchandiser and place in cooler. Always disconnect electrical power before cleaning.

- 1. Place a small screw driver between the front grille and step pan. Gently lift the step pan's front lip up. Grasp the step pan with both hands to remove. Always wear gloves when removing step pan.
- 2. Use non-abrasive cleaning materials and a mild detergent to clean the step pan.
- 3. Wipe down the insides of the merchandiser with a mild detergent, and replace step pan.

P/N 0515258\_G 4-3

#### CLEANING THERMOMETER

Remove the two screws holding the thermometer to its mounting bracket. Remove the sensing element from its clip. Clean the element with water and mild detergent solution. Ensure the sensing element is wiped clean of any residue to ensure proper temperature readings.

## **A** WARNING

Do NOT use HOT water on Cold glass Surfaces. This can cause the glass to shatter and could result in personal injury. Allow glass fronts, to warm before applying hot water.

#### **CLEANING COILS**

Condenser coils should be cleaned at least once per month. Additional cleaning may be needed depending on the operational environment. A dirty condenser blocks normal airflow through the coils.

NEVER USE SHARP OBJECTS AROUND COILS. Use a soft brush or vacuum brush to clean debris from coils. Do not puncture coils! Do not bend fins. Contact an authorized service technician if a coil is punctured, cracked, or otherwise damaged.

ICE in or on the coil indicates the refrigeration and defrost cycle is not operating properly. Contact an authorized service technician to determine the cause of icing, and to make adjustments as necessary. To maintain product integrity, move all product to a cooler until the unit has returned to normal operating temperatures.

## **WARNING**

SHUT FANS OFF DURING CLEANING PROCESS.

Airflow blockage increases energy consumption and reduces the merchandiser's ability to maintain operating temperature.

To clean the coils, use a vacuum cleaner with a wand attachment and a soft (non-metallic) brush to remove dirt and debris. Do not bend coil fins. Always wear gloves and protective eye wear when cleaning near sharp coil fins and dust particles.

#### **CLEANING EVAPORATION PAN**

(SELF CONTAINED ONLY)

The condensate water outlet for self contained models empties into a limited capacity evaporation pan.

Debris or dirt accumulation inside the condensate evaporation pan or on the heater coil will reduce the pan's evaporation capacity and cause premature heater failure. The evaporation pan waste water will overflow and spill onto the floor if the heater is not properly operating.

Remove accumulated debris from the evaporation pan. Wipe down heater coil with a cloth and warm water. Be sure to remove any dirt, debris or liquids from the heater coil.

Water introduced during cleaning will cause the evaporation pan to overflow.

## **↑** CAUTION

#### **Evaporation Pan is Hot!**

and poses risk of bodily injury — Always Wear gloves and protective eye wear when servicing. Turn off evaporation pan heater, and allow pan to cool.

## REMOVING SCRATCHES FROM BUMPER

Most scratches and dings can be removed using the following procedure.

- 1. Use steel wool to smooth out the surface area of the bumper.
- 2. Clean area.
- 3. Apply vinyl or car wax and polish surface for a smooth glossy finish.

## MAINTAINING FLUORESCENT LAMPS (FOR OPTIONAL LIGHT BAR KIT)

Fluorescent lamps should not be allowed to run to failure. If a re-lamp schedule is not in place, the tubes should be inspected for signs of degradation (blackened ends). Degraded or failed tubes should be replaced.

Allowing severly degraded lamps to operate may cause a ballast failure or could expose the lamp holder to excessive heat. Replacing degraded bulbs is more cost effective than replacing ballast and lamp-holders. Traditional re-lamp programs are 18-to-24 month intervals. In the absence of a re-lamp program, a yearly inspection of the lighting system is recommended.

- 1. Inspect all lamp sockets and plug-receptacle connections for signs of arching. Replace any component that shows signs of arching.
- 2. Make sure all unused receptacles have their close-off covers securely installed.
- 3. Make sure proper cleaning procedures are followed. Lights and fans MUST be turned off when a case is cleaned and MUST be allowed to dry before turning power back on.
- 4. Do not use a pressure nozzle to clean inside of case.

## PRECAUTION CLEANING PRECAUTIONS

#### When Cleaning:

- Do not use high pressure water hoses
- Do not introduce water faster than waste outlet can drain
- NEVER INTRODUCE WATER ON SELF CONTAINED UNIT WITH AN EVAPORATION PAN
- NEVER USE A CLEANING OR SANITIZING SOLUTION THAT HAS OIL BASE (these will dissolve the butyl sealants) or an AMMONIA BASE (this will corrode the copper components of the merchandiser)
- TO PRESERVE THE ATTRACTIVE FINISH:
- Use a water and a mild detergent for the exterior only
- Do NOT use a chlorinated cleaner on any surface
- Do NOT use abrasives or steel wool scouring pads (these will mar the finish)

NOTES:

#### **SERVICE**

## REPLACING FAN MOTORS AND BLADES

Should it ever be necessary to service or replace the fan motors or blades be certain that the fan blades are reinstalled correctly. The blades must be installed with raised embossing (part number on plastic blades) positioned as indicated on the parts list.

#### For access to these fans:

- 1. Remove product and place in a refrigerated area. Disconnect electrical power.
- 2. Remove bottom step pan.
- 3. Disconnect fan from wiring harness.
- 4. If it is determined that fan motor needs to be replaced, remove fan motor brackets from the fan plenum as shown.
- 7. Replace fan motor and/or blades.
- 8. Install brackets to fan motor and install motor and bracket to the plenum.
- 9. Reconnect fan motor to wiring harness.
- 10. Turn on power.
- 11. Verify that motor is working and blade is turning in the correct direction.
- 12. Reinstall display pans. Bring merchandiser to operating temperature before restocking.

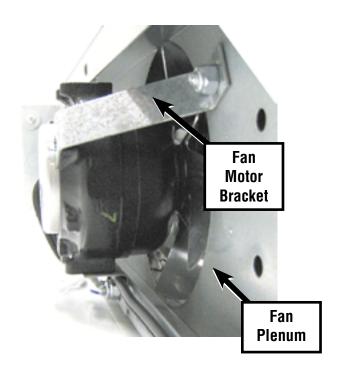

## **WARNING**

Product will be degraded and may spoil if allowed to sit in a non-refrigerated area.

## **WARNING**

— LOCK OUT / TAG OUT —

To avoid serious injury or death from electrical shock, always disconnect the electrical power at the main disconnect when servicing or replacing any electrical component. This includes, but is not limited to, such items as doors, lights, fans, heaters, and thermostats.

#### 5-2 **SERVICE**

#### REPLACING LIGHTS

This section is only valid if the Optional Light Bar is ordered — field installed only.

There is a convenient ON/OFF switch located on the light bar. This switch only controls the lights. ALWAYS disconnect electrical power when replacing lights or lighting parts.

SHM merchandisers are available with optional LED lights. The bulb is sleeved to protect the lights from damage. If these bulbs need to be replaced, slide the prongs clear of the lamp holder. Ensure that the prongs on the replacement bulb twist and lock into place.

#### REPLACING BALLAST / POWER SUPPLY

LED fixture replacement follows the same steps as fluorescent bulbs. However, LED fixtures have the sleeve built in as a single assembly. The LED power supply is located in the electrical box of the light bar kit.

## **A** WARNING

Fluorescent lamps contain mercury vapor. Mercury exposure at high levels can harm the brain, heart, kidneys, lungs, and immune system of people of all ages. Do not break or puncture fluorescent lamps. Dispose of, or store, all fluorescent lamps in accordance with Federal (40 CFR 273), State, and local hazardous waste requirements. Refer to:

http://www.epa.gov/mercury/about.htm

DOE 2012
Energy Efficiency
Compliant

Hussmann refrigerated merchandisers configured for sale for use in the United States meet or surpass the requirements of the DOE 2012 energy efficiency standards.
